## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-3, and 7 drawn to a decentralized web site content control system by dividing a web page into discrete areas and assigning control over the areas to separate content authorities, classified in class 709, subclass 203.
  - II. Claims 4-6, drawn to a system for collecting information for display on updateable screen space areas by establishing a format for content that may be entered into each screen space area, classified in class 709, subclass 219.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as lacking a display system to display the content submitted by the content providers in the discrete areas. See MPEP § 806.05(d).

Art Unit: 2143

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

5. Group II (claims 4-6) recite limitations not included in Group I (claims 1-3, and 7) which make it patentably distinct. Specifically, Group II recites establishing a format for the content may be entered into each screen space area and providing a form to input data as to be uploaded to the screen space area.
